

REFCAM

ABOUT REFCAM

Our Refcam is a universal solution consisting of a mini-camera, specially designed camera mount, professional COFDM wireless camera transmitter and set of antennas. Camera can be easily attached and de-attached to/from any helmet, allowing referees to use personal gears they are used to. The whole kit of 2 modules weighs only 340 g and is perfectly balanced on the helmet without any wires, thereby eliminating any discomfort for the user. Refcam can be mounted on any of the ice hockey helmets. There's a special modification of the camera made for umpires in field hockey and similar sports - Earcam. It is mounted on the head and weighs only 97 g.

Refcam is designed with an idea of maximum safety in mind: all parts are made of soft plastic and additional safety straps, fixed to the screws of the helmet, prevent Refcam from falling on the ice in any situation.

Battery charge can last up to 1 hour and the battery can be easily replaced during the game breaks. During the operation camera is remotely controlled by the RCP that comes along with the kit and is normally placed in the OB-Van.

By providing a unique visual experience Refcam stands out as a perfect tool to bring viewers closer.

REFCAM SYSTEM FEATURES

Well-balanced integrated design

Camera Parameters:
1/2.5" CMOS, 1080p HDR

Weight: 340 g (incl. battery)
